

Instructions for Authors

The manuscript should be formatted in single spacing and the lines should not be numbered. The text of your paper should be saved as a .doc file. with the author's name and submitted in the website . Manuscripts are expected to document the origin and specificity of reagents used, particularly antibodies and document institutional authorization for conducting research in human and animals, () to conduct adequate statistical analyses and comprehensively report statistical results, in English. Articles and Reviews could also be accompanied with representative colour photograph or illustrations which summarizes the work. This may be selected for display in the index. Any involvement of medical writers/ researchers, particularly those employed or supported by the pharmaceutical industry, in the writing of an article must be clearly defined and disclosed in the Authorship and/or the Acknowledgements section as appropriate. This type of involvement must also be disclosed to the Editor-in-Chief in the cover letter.

Submitted manuscripts are assigned to an Associate Editor and/or and Editorial Board member who are responsible for its evaluation. They may get it evaluated from another expert in the field. The Editor-in-Chief's decision regarding publication is based on the recommendation of the reports of reviewers, which will, at the Editors' discretion, be transmitted to the corresponding author.

Editorial policy

Integrative Medicine Case Reports adheres to the highest standards concerning its editorial policies on publication ethics, scientific misconduct, consent and peer review criteria. The journal follows guidance produced by bodies that include the International Committee of Medical Journal Editors (ICMJE).

We take seriously all possible misconduct. If an Editor, author or reader has concerns that a submitted article describes something that might be considered to constitute misconduct in research and publication they should forward their concerns to the journal.

Peer review process

Articles submitted to Integrative Medicine Case Reports are subject to peer review by at least two experts. The journal operates single blind peer review whereby the names of the reviewers are hidden from the author.

Integrative Medicine Case Reports is committed to transparency. Every article we publish includes a description of its provenance (commissioned or not commissioned) and whether it was internally or externally peer reviewed.

Cover Letter

A cover letter should specify:

- Type of submission (Case Report, Research Article, Review, etc.)
- The corresponding author complete with a mailing address, telephone and fax numbers, and an email address.
- A statement by the author certifying that all coauthors have seen and agree with the contents of the manuscript.
- Certify that the submission (aside from an abstract) is not under review at any other publication.
- Authorship Contributions
- The name, address, fax number and e-mail address of the person who will deal with correspondence, including verification proofs.
- The total number of pages, figures, tables and equations
- The total number of words in: (i) the whole manuscript; (ii) the Abstract; and (iii) the Introduction.
- A list of four or five keywords not appearing in the title, preceded by "Keywords:"

Discussion

The Discussion could contain the summary of the major findings, while avoiding repetition of the statements in Abstract or the Results. Citing literature supporting or defying the findings should be provided. The Discussion should be able to project a major advancement of scientific concept, method or effect.

Conclusion

The Conclusion contain outcome of the results. It always requires strong concluding remark to leave an impact on readers.

Authorship

Papers should only be submitted for consideration once consent is given by all contributing authors. Those submitting papers should carefully check that all those whose work contributed to the paper are acknowledged as contributing authors.

The list of authors should include all those who can legitimately claim authorship. This is all those who:

- Each author should have participated sufficiently in the work to take public responsibility for appropriate portions of the content
- Drafted the article or revised it critically for important intellectual content,
- Approved the version to be published, .
- Made a substantial contribution to the concept or design of the work; or analysis or interpretation of data, Authors should meet the conditions of all of the points above.

When a large, group has conducted the work, the group should identify the individuals who accept direct responsibility for the manuscript. These individuals should fully meet the criteria for authorship.

Acquisition of funding, collection of data, or general supervision of the research does not constitute authorship, although all contributors who do not meet the criteria for authorship should be listed in the Acknowledgments section.

Acknowledgements

All contributors who do not meet the criteria for authorship should be listed in an Acknowledgements section. Examples of those who might be acknowledged include a person who provided purely technical help, or a department chair who provided only general support.

Please supply any personal acknowledgements separately to the main text to facilitate anonymous peer review.

Ethical Standards

All studies using human or animal subjects should include carry a declaration identifying the Institution or Review Committee which approved the study. For a case report, only informed consent from the patient/ individual is required. Editors reserve the right to reject papers if there

is doubt whether appropriate procedures were followed or competing financial interests have not been disclosed.

- Studies with human subjects
 - When human subjects are in the study, manuscript must be accompanied by a statement that the experiments were undertaken with the written consent of each subject, and that the study conforms with institute ethical committee guidelines.
- Studies involving experimental animals

The methods section must briefly that almost care was taken to minimize pain or discomfort and the ethical committee should be identified.

Experimental Animals

The species, strain, sex, age, supplier and numbers of animals used should be specified. If transgenic or knockout animals are used the established nomenclatures must be used.

Reagents

The control experiments that were conducted to ensure the specificity of the method should be described, along with key references to previous work with this reagent. For antibodies, this documentation includes a precise description of the antigen, the nature of the antibody (species, purification), the supplier, catalogue number, and specificity tests performed.

Competing Interests/ Conflict Of Interest

If there is likely to be economic gain (patents, financial investments, consulting agreements resulting from having utilized experimental approaches, instruments, methods or drugs, or of having discussed such items in the manuscript, represents a competing interest. Competing interests should be clearly disclosed and described in detail in the Acknowledgements. It is in the interest of the author to disclose such interests, and Integrative Medicine International requires such disclosure. If the author does not declare any competing interest or doesn't declare the adherence to ethical guidelines it will be assumed that there exists no competing interest or absence of ethical approvals which will be reflected in the paper once it is accepted. In addition, author can also declare conflict of interest by suggesting exclusion of at least two reviewers. The article should comply with International committee of Medical Journal (ICMJE) Editor's uniform requirements for the manuscripts.

Source of funding

This journal requires all authors to acknowledge their funding in a consistent fashion under a separate heading. This research received no specific grant from any funding agency in the public, commercial, or not-for-profit sectors. Failure to provide this information will be considered a statement of no funding source and will be mentioned as such with publication.

Statistical Methods

A complete description of statistical methods is required. The main statistical results should be described in the Results section. The description of statistical results in the figure legends should be limited to important analysis. The description of the statistical results should include the degrees of freedom.

References

All references must be listed, and all listed references must be cited at least once in the main text. Vancouver style should be followed for all the references.

Journal Club

Graduate students or post doctoral fellows can write a commentary on a published paper from any reputed journal and describe the findings under following headings: Background Study design and Implication. Reports of national and international meetings, workshops, conferences and schools are welcome in narrative style. Maximum limit is 1000 words
